

Postdoc Position in Marine Microbiology

The **Marine Microbial Ecology Lab at Bar-Ilan University** is seeking an engaged and motivated postdoctoral candidate for an exciting ERC-funded project on the underlying factors that shape microscale interactions in the ocean. Research will focus on the molecular ecology of host-virus interactions in marine diatoms – a widespread and biogeochemically critical group of phytoplankton.

Project will combine lab and field-based research, standard microbiology and algal culturing techniques, and the development and application of molecular tools and single cell-based approaches in marine diatoms and viruses. A strong background in microbiology and molecular biology is required. For additional information please see: <https://www.kranzlerlab.com>.

To apply please contact: chana.kranzler@biu.ac.il
